QA Strategy and Execution Document

Project: MindBridge — Shareable Content Feature

Your name Jonathan Rogelio Galindo Veltran

Date October 1, 2026

Jira project name QA Testing

Complete all four sections below. Use the section structure exactly as provided — the graded assignment that follows this lab looks for information in these specific sections. When finished, export this document as a single PDF for submission.

Section 1: Architecture and RACI Matrix

For each application layer, assign a role to the QA Team and the Dev Team. Use one of: **R** (Responsible), **A** (Accountable), **C** (Consulted), or **I** (Informed). Do not leave any cell blank.

Layer	QA Team Role	Dev Team Role
UI	**R**	**A**
API	**R**	**A**
DB	C	A

Section 2: STLC Strategy and Environments

In a few bullet points, explain which techniques you will use and where you will test. Your strategy must name **at least one static**

technique, **at least one dynamic technique**, and **the test environment**.

Técnicas de Prueba Estática (Static Testing Techniques)

- **Revisión de Requerimientos e Historias de Usuario:** Inspección y análisis estático de criterios de aceptación, maquetas de diseño y tickets de Jira antes del desarrollo para identificar vacíos tempranamente.
- **Revisiones por Pares de Código y Pruebas:** Revisión de scripts de prueba, solicitudes de extracción (Pull Requests) de automatización y contratos de API en el backend.

Técnicas de Prueba Dinámica (Dynamic Testing Techniques)

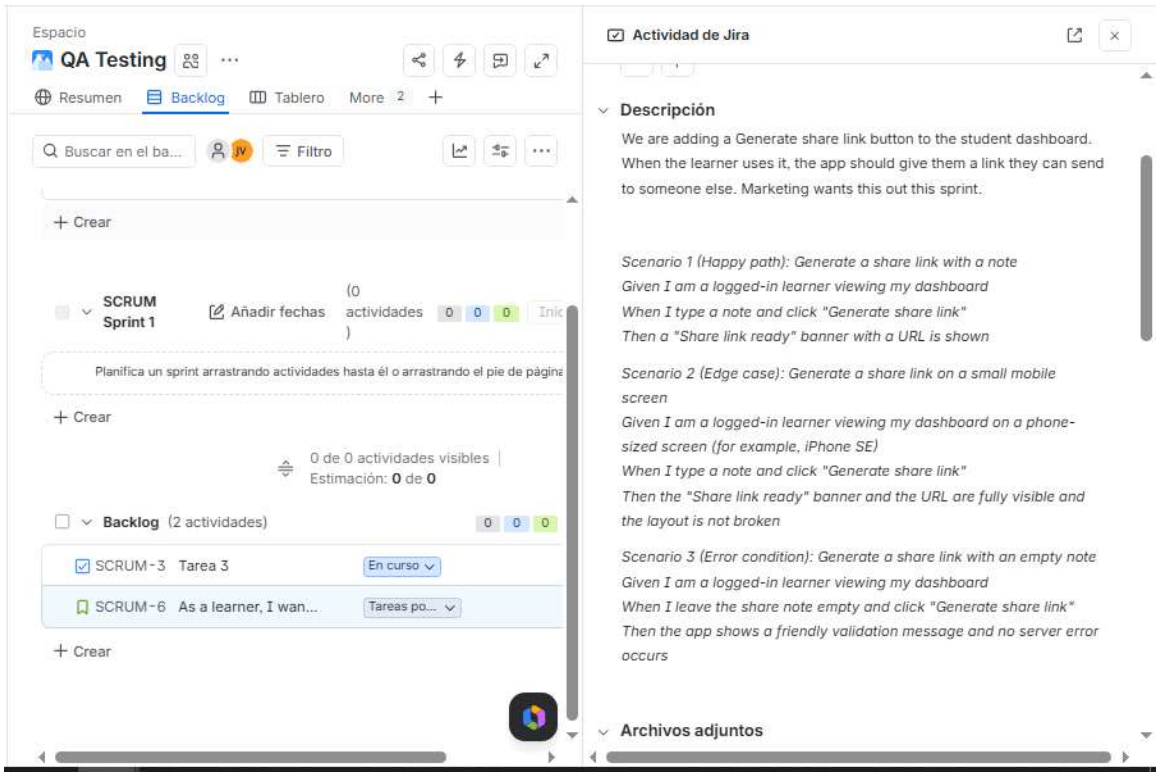

- **Pruebas Funcionales Manuales y Exploratorias:** Ejecución de casos de prueba funcionales en UI e inter-navegador en múltiples tamaños de pantalla (Escritorio y Móvil).
- **Pruebas de API e Integración:** Validación directa de endpoints REST API usando Postman / DevTools para inspeccionar códigos de estado, estructuras de payload y respuestas de error.
- **Pruebas de Regresión Automatizadas:** Ejecución de suites automatizadas de UI y API tras despliegues en el entorno de staging.

• Entorno de Pruebas (Test Environment)

Entorno de Staging Identificado: http://localhost:3000

Section 3: BDD Acceptance Criteria

After editing the Jira user story to add your three Given-When-Then scenarios (a happy path, an edge case, and an error condition), take a screenshot of the updated ticket and insert it below. All three scenarios must be clearly visible in the description field.

Section 4: Defect Log and Execution Evidence

Document the seeded defect you found while executing your BDD scenarios against the staging environment.

Defect title	Description	Steps to reproduce	Expected result	Actual result	Severity

Internal server error (500) when generating a share link with an empty note	The app shows "Internal server error." and the share-link request returns status 500 instead of a friendly validation message.	1.Log in at localhost:3000 with admin@mindbridge.local and open the Dashboard. 2.Leave the "Share note" field empty and click "Generate share link". 3.Observe the error message and the share-link request in the DevTools Network tab.	The app shows a friendly validation message asking for a note, and no server error occurs.	The app shows "Internal server error." and the share-link request returns status 500.	High

Insert a screenshot that clearly shows evidence of the defect (any one of the defects):
